

Providing Innovative Solutions for Your Custom Synthesis Needs

Polysciences, Inc. has been serving the global scientific community for over 40 years. We provide unique organic materials and a broad product line of electronic adhesives, coatings and encapsulants. Specializing in custom formulations to meet your distinct needs.

Consider the advantages...

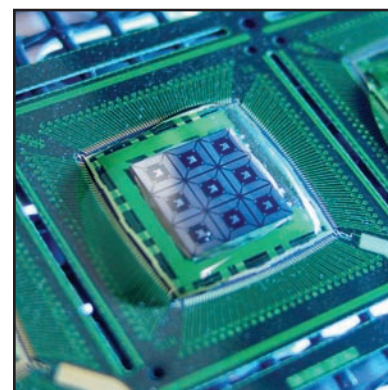

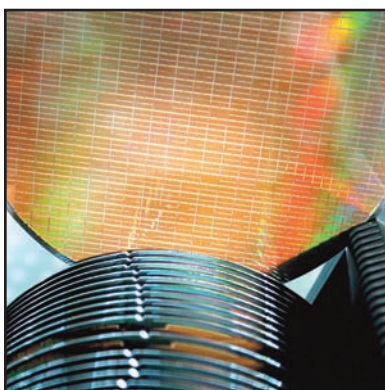

- Responsive, rapid turnaround of your project
- Complete confidentiality and protection of your intellectual property and its value
- Economic alternative to in-house activities
- EPA registered facility with expertise in handling sensitive, complex and hazardous materials

With our expertise, we work with you to design and synthesize your unique product...

- New and unique monomers
- New particle architectures
- Electronic grade organic materials
- Photoreactive monomers and polymers

Whether you are scaling up your R&D process or creating a new process, we work with you to turn possibilities into opportunities. We can produce your product in a one-off run or manufacture your product on a routine basis. From milligrams to thousands of kilograms per year, you can count on Polysciences to provide you with consistent batch-to-batch quality, on-time delivery and maximum value.
